

Engineered to Endure.

The Luxury is in the Finish.

CABINET CARE INSTRUCTIONS

The First 10 Days Matter

Your professional cabinet coating continues to cure after installation. Treat the finish gently during this period so it can develop its intended hardness and durability.

1	USE THE HARDWARE	Open doors and drawers by the knobs or pulls — never by the freshly finished surfaces.
2	KEEP IT DRY	Wipe spills promptly. Do not leave wet towels, standing water or damp items against cabinetry.
3	CLEAN LIGHTLY	When needed, use only a soft microfiber cloth lightly dampened with warm water, then dry immediately.
4	NO HARSH CLEANERS	During cure, avoid multipurpose cleaners, sprays, polishes, waxes, ammonia, bleach and silicone.

AFTER 10 DAYS | Follow the everyday care instructions on page 2.

CABINET REFINISHING CARE GUIDE

Simple care. Long-lasting beauty.

A durable finish still deserves the right care. These habits help protect both the coating and the cabinetry beneath it.

EVERYDAY CLEANING

- Use a soft, lint-free microfiber cloth.
- For light cleaning, use warm water or a small amount of mild dish soap.
- Work in small areas and dry the surface immediately with a clean, soft cloth.
- Wipe food, grease and spills promptly — especially around sinks, dishwashers and cooking areas.

PROTECT THE CABINETRY

- Maintain indoor relative humidity around 35–50% when practical.
- Use your cabinet knobs and pulls to reduce repeated hand oils and wear on doors and drawer fronts.
- Protect surfaces from sharp impacts, abrasive tools, excessive heat and prolonged moisture.

IF SOMETHING LOOKS OFF

- Stop cleaning and reach out before trying another product.
- A quick photo of the area helps us diagnose it faster.

DO NOT USE

- ✕ Ammonia or bleach
- ✕ Multipurpose or aerosol cleaners
- ✕ Wax, polish or silicone products
- ✕ Abrasive pads, scrub brushes or magic-eraser-type abrasives
- ✕ Harsh solvents or aggressive degreasers
- ✕ Sharp objects or scraping tools

IMPORTANT

Never spray cleaner directly onto cabinet doors, drawer fronts, frames or finished end panels. Apply moisture to the cloth — not the cabinetry.

WHAT TO EXPECT

- Sheen can look slightly uneven for the first few weeks while the coating finishes curing.
- A faint finish odor may linger briefly — ventilate the room normally.

A NOTE ABOUT WOOD MOVEMENT

Wood naturally expands and contracts as humidity changes. On painted doors and drawer fronts, a fine hairline may occasionally become visible at a wood joint. This is cosmetic and does not indicate a failure of the coating or the cabinet structure.
